

1.

```
mkdir wordpress && cd wordpress
mkdir nginx-conf
change
```

```
nano .env
change
nano .dockerignore
```

```
nano docker-compose.yml
change
```

```
docker-compose up -d
docker-compose up -d --force-recreate --no-deps webserver
```

```
curl http://osuslova.com
```

2.

```
sudo docker network create my-network
sudo docker run --name my-db --network my-network -e
MYSQL_ROOT_PASSWORD=password -d mariadb:10.8
sudo docker run --name my-phpmyadmin --network my-network -e PMA_HOST=my-
db -p 8080:80 -d phpmyadmin
curl http://localhost:8080
```
